

Enable S/MIME on mobile

Microsoft recently released an update to the Outlook mobile (iPhone & Android) in support of S/MIME. If you're unaware, S/MIME is the protocol behind signing and encrypting email with your CAC. We still can't send or read CAC encrypted email on our phones, but this update does give you the ability to validate signatures and open attachments in signed emails. In order to enable this setting, open the Outlook mobile app and click Menu -> Settings -> Account -> Security -> S/MIME
